

**Report on paper presented in 5th International Conference on Materials Processing and
Characterization**

I attended a Conference named “5th International Conference on Materials Processing and Characterization” held at Hyderabad, Goa from 13-14 March,2016. My paper titled “Modeling of dimensional accuracy in precision investment casting using Buckingham's Pi approach” was accepted in the conference. The contents of the paper were well appreciated by the session chair and the audience. There were various other papers presented in the conference along with expert talks. The variation in backgrounds of the participants resulted in excellent learning and interactions on the subject. I thank TEQIP cell GNDEC Ludhiana for sponsoring me for attending and presenting my paper in the Conference.

Dr.Rupinder Singh
(Professor)
