Data-Driven and Advanced Materials for Smart Manufacturing and Energy Applications**Guest Editor****Dr Raman Kumar***Guru Nanak Dev Engineering College, Ludhiana, Punjab, India*

This Collection focuses on recent advances in sustainable and intelligent materials enabled by advanced manufacturing, data-driven optimization, and artificial intelligence. It highlights the design, processing, characterization, and performance optimization of functional, composite, and energy materials for smart manufacturing, renewable energy systems, and Industry 4.0 applications, bridging experimental, computational, and AI-assisted materials research.

About the journal

Discover Materials is a broad, open access journal publishing cutting edge research across all fields of materials science, from fundamental studies to synthesis, characterization, modelling, and applications. It has been indexed in Web of Science (ESCI) and Scopus, with the newest impact factor of **5.8** and the newest CiteScore of **4.0**.

Editor-in-Chief: Prof. Rodrigo Martins, (*Universidade Nova de Lisboa, Portugal*)
