

I have attended the Short term course on “Advanced Data Analysis for Management (ADAM)” which has been held in Indian Institute of Technology, Delhi during Dec. 14-18, 2015. This STC has been attended by various academicians and technocrats from all over India. In this STC, the resource persons have made presentations on diverse topics such as: Research methodologies, Regression analysis, ANOVA, Analytical hierarchal process, quantitative and qualitative managerial decision making, Data envelopment analysis, Big data analysis among others. The resource persons were from IIT Delhi, IIT Kanpur, IIT Roorkee, NIT Jalandhar and from other reputed organization. The participants have also got opportunity to present their views in interactive sessions. I have also participated in discussion sessions with the present energy scenario of our country. Overall, this was a great opportunity to explore the novel ideas, which would surely help me in teaching and research.
