

REPORT

I attended the TEQIP sponsored short term training programme (STTP) on Six Sigma Tools and Applications organized by Department of Mechanical Engineering, Malaviya National Institute of Technology, Jaipur in association with Indian Institution of Industrial Engineering (IIE), NHQ-Mumbai from Dec, 16-20, 2013. It was an interdisciplinary course. Six sigma focuses on process improvement through waste elimination and variation reduction. The following topics were covered during this five day course – Six sigma – DMAIC Overview, Define, Measure, Analyze, Improve and Control phases. Also a hand on practice was held for integrating the MINITAB tool with six sigma problems. This course served as platform for me to interact with other academicians and researchers from different parts of the country.
