

Tour Report

I was sponsored by TEQIP-II cell, Guru Nanak Dev Engineering College, Ludhiana to attend workshop on “Designing Medical Implants & Fixtures” held at Indian Institute of Technology, New Delhi on 9th and 10th May, 2015. Expert lectures were delivered by the leading academic, clinical and industry experts in this domain. I got the opportunity to learn about the design of medical implants along-with hands on experience on MIMICS software and also about the role of 3-D printing in the biomedical engineering domain. The ideas and methods presented and discussed in the workshop will help me to carry inter-disciplinary research in an effective manner as well as to guide PG students. Moreover the experience in the workshop will help in organizing national/international events at our Institute in a better way. I thank the TEQIP –II cell for nominating and helping me get this exposure.
