## INTRODUCTION

PHP is an open-source, server-side, HTML embedded Web-scripting language that is compatible with all the major Web servers (most notably Apache). PHP enables you to embed code fragments in normal HTML pages—code that is interpreted as your pages are served up to users. PHP also serves as a “glue” language, making it easy to connect your Web pages to server-side databases. MySQL is the most popular Open Source database platform, and it is the first choice of many for creating database-backed PHP-driven Web sites.

## COURSE CONTENTS

- Why PHP and MySQL
- Adding PHP to HTML
- Syntax and Variables
- Control and Functions
- Arrays and Arrays Functions
- Passing Information between pages
- Choosing a databases for PHP
