

Content

Module:3 Element Properties (09)

Lecture 1: Natural Coordinates (Page:1-8)

3.1.2 Two Dimensional Triangular Elements

3.1.3 Shape Function using Area Coordinates

Lecture 2: Triangular Elements (Page:9-17)

3.2.1 Shape function using Cartesian coordinates

3.2.2 Higher Order Triangular Elements

3.2.2.1 Shape function for six node element

3.2.3 Construction of Shape Function by Degrading Technique

3.2.3.1 Five node triangular element

Lecture 3: Rectangular Elements (Page:18-24)

3.3.1 Shape Function for Four Node Element

3.3.1.1 Shape function using Cartesian coordinates

3.3.1.2 Shape Function using natural coordinates

3.3.2 Shape Function for Eight Node Element

Lecture 4: Lagrange and Serendipity Elements (Page:25-33)

3.4.1 Lagrange Interpolation Function

3.4.1.1 Shape function for two node bar element

3.4.1.2 Shape function for three node bar element

3.4.1.3 Shape function for two dimensional elements

3.4.2 Serendipity Elements

Lecture 5: Solid Elements (Page:34-39)

3.5.1 Tetrahedral Elements

3.5.2 Brick Elements

Lecture 6: Isoparametric Formulation (Page:40-47)

3.6.1 Necessity of Isoparametric Formulation

3.6.2 Coordinate Transformation

3.6.3 Concept of Jacobian Matrix

Lecture 7: Stiffness Matrix of Isoparametric Elements(Page:48-55)

3.7.1 Evaluation of Stiffness Matrix of 2-D Isoparametric Elements

3.7.2 Evaluation of Stiffness Matrix of 3-D Isoparametric Elements

Lecture 8: Numerical Integration: One Dimensional(Page:56-60)

3.8.1 Gauss Quadrature for One-Dimensional Integrals

3.8.2 One- Point Formula

3.8.3 Two-Point Formula

Lecture 9: Numerical Integration: Two and Three Dimensional(Page:61-67)

3.9.1 Gauss Quadrature for Two-Dimensional Integrals

3.9.2 Gauss Quadrature for Three-Dimensional Integrals

3.9.3 Numerical Integration of Element Stiffness Matrix

3.9.4 Gauss Quadrature for Triangular Elements

3.9.5 Gauss Quadrature for Tetrahedron

Worked out Examples (Page:68-74)

Example 3.1 Calculation of displacement using area coordinates

Example 3.2 Derivation of shape function of four node triangular element

Example 3.3 Numerical integration for three dimensional problems
