Module 6 FEM for Plates and Shells (06)

Lecture 1: Introduction to Plate Bending Problems(Page: 1-10)

6.1.1 Introduction

6.1.2 Notations and Sign Conventions

6.1.3 Thin Plate Theory

6.1.3.1 Basic relationships

6.1.3.2 Constitutive equations

6.1.3.3 Calculation of moments and shear forces

6.1.4 Thick Plate Theory

6.1.5 Boundary Conditions

Lecture 2: Finite Element Analysis of Thin Plate(Page: 11-17)

6.2.1 Triangular Plate Bending Element

6.2.2 Rectangular Plate Bending Element

Lecture 3: Finite Element Analysis of Thick Plate (Page: 18-24)

6.3.1 Introduction

6.3.2 Strain Displacement Relation

6.3.3 Element Stiffness Matrix

6.3.4 Nodal Load Vector

Lecture 4: Finite Element Analysis of Skew Plate (Page: 25-31)

6.4.1 Introduction

6.4.2 Finite Element Analysis of Skew Plate Element

Lecture 5: Introduction to Finite Strip Method(Page: 32-37)

6.5.1 Introduction

6.5.2 Finite Strip Method

6.5.2.1 Boundary conditions

6.5.3 Finite Element Formulation

Lecture 6: Finite Element Analysis of Shell(Page: 38-45)

6.6.1 Introduction

6.6.2 Classification of Shells

6.6.3 Assumptions for Thin Shell Theory

6.6.4 Overview of Shell Finite Elements

6.6.5 Finite Element Formulation of a Degenerated Shell

6.6.5.1 Jacobian matrix

6.6.5.2 Strain displacement matrix

6.6.5.3 Stress strain relation

6.6.5.4 Element stiffness matrix
